

EXPERT MEETING
ON A RULE-BASED SUPPLY FLEXIBILITY MECHANISM FOR THE ETS

2 October 2013, 14:00 – 17:00

Brussels, Berlaymont, Room S3 (3rd floor)

Questions for the expert discussion

- What type of triggers should be considered for a mechanism to render auction supply more flexible?
- How should the value(s) for the trigger be fixed and when / how often should they be reviewed?
- Should such a mechanism to render auction supply more flexible be designed so that it only applies in cases of severe demand shocks or should more regular "fine-tuning" be aimed for?
- Is there a need to limit the size of the annual adjustments / should larger adjustments take place over several years?
- Should the rules for releasing allowances from such a reserve mechanism differ from the rules to feed allowances into the reserve?
